BUILDING VALUE IN THE HEART OF THE PROLIFIC COPPER DISTRICT OF SOUTHERN PERU

Strategically Positioned For
A World Class Discovery

- Six groups of concessions, covering 36,225Ha
- Both Iron Oxide Copper Gold (IOCG) and porphyry targets
- Ilo Norte – IOCG and Skarn/replacement style mineralization
- Ilo Este – Copper-Gold porphyry covering 3km²
- Four other earlier stage projects
- 125 billion lbs of copper in reserves/resources within 100km
– half of Peru's copper production comes from this area

PERU (Cu)

ILO ESTE DISTRICT

- 8 contiguous concessions of a 6,200Ha district in highly prospective coastal IOCG/Porphyry Copper belt of Southern Peru
- Mapping, geochemistry and geophysics evidence indicates a porphyry copper-gold-molybdenum mineralization
 - Geophysics has identified untested anomalies consistent with a porphyry system
 - Numerous rock chip samples >1,300ppm Cu
- Past exploration conducted by Rio Tinto including:
 - 12 RC drill holes all holes drilled are shallow holes with a depth of <200m
- Porphyry mine located within 90km along strike NW at Tia Maria

ILO NORTE DISTRICT

- 4 contiguous concessions 3,300Ha district in highly prospective coastal IOCG/Porphyry Copper belt of Southern Peru
- Over 10,000m diamond drilling completed with best intersections:
 - 18m @ 0.66%Cu, 0.09 g/t Au
 - 30m @ 0.93%Cu, 0.01 g/t Au
 - 6m @ 3.1%Cu, 0.45 g/t Au
- Large alteration of IOCG and Skarn replacement style mineralization identified
 - Alteration and mineralization is 10km long and several hundred meters thick
- 5km from road, 10km from copper smelter, 25km from port of Ilo

OTHER TARGETS

- 2,600Ha PanAmericana porphyry project
- 10,900Ha Cerrillos-Costena-Galle skarn/porphyry project
- 12,225Ha MoqueTac porphyry project
- 1,000Ha Fremantle porphyry project

**Peru projects subject to TSX approval of acquisition*
